Build Your AI Marketing Team with Agents

ONE 60-MINUTE SESSION

Interview AI to create two foundation files. Create a skill, define six roles, and coordinate a fictional marketing campaign.

Your class sequence

Stage	Time
Interview, two files, and opening	7 minutes
Reusable skill	5 minutes
Six marketing roles	5 minutes
Specialist assignments	7 minutes
Handoff check	1 minute
Coordinated campaign and review	9 minutes
Dot/voice, campaign Page, and brief proposal	10 minutes
Guided exercise, instructions, and review	13 minutes
Questions and next decisions	3 minutes

The instructor demonstrates prompts 01–09 and guides the ten-minute exercise with prompt 10. Follow along when your account and task timing allow it. Prepared captures and examples support tools that are unavailable.

Copper Cup Coffee and all campaign figures are fictional classroom material.

Open the course repository

Begin with one interview

Create an empty copper-cup-class folder and open it as a local Codex project with file editing permitted, or begin a fresh Work workspace with file tools. Paste prompt 01 and answer its questions.

The interview creates brand/context.md and AGENTS.md. Open the files and confirm the facts, Current campaign section, output paths, and human review boundary. Markdown is a text format with headings.

After saving AGENTS.md, begin a fresh local project chat before prompt 02 so the new guidance loads. In Work, attach the files and explicitly request that they be read. If file tools are absent, ask for downloadable files and save or attach them before the dependent task.

Prepared interview answers

Use these prepared fictional answers during prompt 01.

Brand and offer
Copper Cup Coffee sells a Discovery Box with three 100 g bags, one light, one medium, and one dark roast. USD 29 plus USD 5 shipping. Audience hypothesis: busy professionals who brew coffee at home.

Campaign assignment
Create one reviewed Instagram ad concept, then a small coordinated package with social copy, visual direction, a static offer-page preview, synthetic-data findings, and a checked handoff. Save the first ad in campaigns/discovery-box/run-01/ and the full package in coordinated-01/.

Voice and visual direction
Use warm, specific, and restrained language. Cream #FAF4EA, espresso #2B2118, teal #087F8C, copper #C76A42. The CTA is Explore the Discovery Box. Product facts need sources. Certifications, health claims, sustainability claims, awards, testimonials, discounts, and performance promises remain unsupported.

Tools and boundaries
Local Codex or Work with accessible files and supported delegation. Dot, voice, Pages, and routines depend on available account access. Produce drafts and local previews. Hold sending, publication, schedules, image-generation charges, spending, deletion, and permission changes for separate decisions.

After the interview
Open the two files and confirm the answers. Begin a fresh local project chat before prompt 02, or attach and explicitly read the files in Work.

The team and its outputs

Role	Owns	Expected output
Marketing Team Lead	Task coordination and source review	Checked review and handoff
Growth Strategist	Audience hypothesis and direction	Strategy and acceptance criteria
Content Creator	Supported audience copy	Ads and social drafts
Creative Designer	Visual direction	Brief and image prompts
Website Designer	Local page implementation	Static HTML preview and source
Growth Analyst	Metric arithmetic and caveats	Findings with formulas and limits

A role card describes a job. An explicit assignment starts an agent task when supported. Inspect task activity and open the saved result. Preserve a sequential role-based label when separate delegation is unavailable.

Skills and local configuration

SKILL.md contains name and description metadata plus a reusable process. Local Codex discovers project skills under .agents/skills. Ask assignments to read the skill explicitly and inspect the file if discovery is absent.

Local custom-agent TOML files use name, description, and developer_instructions under .codex/agents. They inherit parent model settings and permissions. Work Cloud uses accessible role instructions with explicit delegation, with local TOML registration limited to local Codex.

Connected tools within this session

Dot and voice return written task results. A private Page retains sources and full prompts. A marketing brief leads with the next human decision. Recurring routines remain disabled proposals during class, with access and activation reviewed separately.

Prompt inputs and expected results

Prompt	Required input	Created result
01	Empty project and interview answers	Brand context and AGENTS.md
02	Two interview outputs	Ad creative SKILL.md
03	Context, instructions, and skill	Six role cards and local wrappers when applicable
04	Context and Growth Strategist role	run-01/strategy.md
05	Strategy, context, skill, copy and design roles	Ad copy, visual brief, and image prompts
06	Six roles, context, skill, and run-01 outputs	Synthetic data, coordinated assets, page preview, findings, review, handoff
07	Context, instructions, reviewed handoff, Dot access	Written task result or labeled text fallback
08	Attached context, instructions, full prompts, reviewed outputs	Private Page or structured document
09	Attached reviewed outputs and sources	One brief and disabled routine proposals
10	Prepared project and reviewed campaign	Changed audience assignment and reviewed concept

Create each required file before a dependent prompt reads it. The following pages contain every full prompt in teaching order. Copy only the text between its BEGIN and END markers. The prompt files in the repository contain identical text.

Open the ordered prompt index

Prompt 01 · Interview me and create two files

Paste into the selected Work or local Codex project chat.

BEGIN PROMPT 01

> Interview me with questions to create two files for my AI marketing team: brand/context.md and AGENTS.md. Ask up to four concise questions, one at a time, and wait for my answers. Cover my brand, product, price and shipping, audience, campaign goal and channels, tone and visual direction, supported claims, requested outputs, available tools, and the actions that need my approval. Group related details in each question and offer an example answer when I need help. Use facts that I provide and identify gaps instead of inventing them.
>
> For this class I can choose the Copper Cup demo. If I choose it, use these fictional facts and ask me to confirm or change them. Copper Cup Coffee sells a Discovery Box containing three 100 g bags, one light roast, one medium roast, and one dark roast, for USD 29 plus USD 5 shipping. The audience hypothesis is busy professionals brewing coffee at home. The CTA is Explore the Discovery Box. The voice is warm, specific, and restrained. The palette is cream #FAF4EA, espresso #2B2118, teal #087F8C, and copper #C76A42. The class goal is a reviewed ad concept and a small coordinated campaign package. Certifications, health benefits, sustainability claims, awards, testimonials, discounts, and performance promises require supporting sources.
>
> After the interview, summarize confirmed facts and open questions, then create only the two named files. Put brand facts, audience hypotheses, voice, visuals, CTA, and a Current campaign section in brand/context.md. Put source-reading rules, role and skill routing, named draft output folders, missing-input handling, and human review boundaries in AGENTS.md. Project instructions operate within app permissions and higher-priority instructions. Show both saved paths and a short summary. Explain .md as a text document with headings in one sentence. Ask me to begin a fresh local Codex project chat before prompt 02 so the new instructions load. In Work, attach the files and explicitly request that they be read. Stop before creating skills, role cards, or campaign outputs.
>
> Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, return downloadable files or full copyable text and name the missing file access. Report saved files separately from proposals.

END PROMPT 01

Check before continuing

Open the two files and confirm that your answers appear accurately. Find the Current campaign section and the human review boundary.

Prompt 02 · Create the reusable ad skill

Paste into the selected Work or local Codex project chat.

BEGIN PROMPT 02

> Read AGENTS.md, brand/context.md, and the Current campaign section in brand/context.md. Create only .agents/skills/albert-copper-cup-ad-creative/SKILL.md. Include valid YAML frontmatter with name: albert-copper-cup-ad-creative and a description that triggers for Copper Cup ad copy, ad concepts, visual briefs, and image prompts.
>
> The process should read the brand and brief, select an audience need, draft three copy options unless the assignment requests one, check each product claim against the source, propose visual direction and image prompts, and return a review checklist. Separate copy drafting from artwork generation. Keep image creation optional and subject to available tools and account permissions. Text drafts and image prompts are sufficient for this class. Name the saved campaign output directory and hold external actions for human review.
>
> Explain the frontmatter name and description, then show the process headings and completion criteria. Saving this process does not start a specialist task. Show the saved file path and how to ask the next task to read this skill explicitly. Stop after creating and explaining the skill.
>
> Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, provide the full named files as downloadable files or copyable text and explain how I can save them. Report actual saved files separately from proposed files.

END PROMPT 02

Check before continuing

Open SKILL.md, locate name and description between --- lines, and identify the source check and completion criteria.

Prompt 03 · Create the marketing team roles

Paste into the selected Work or local Codex project chat.

BEGIN PROMPT 03

Read AGENTS.md, the brand context, its Current campaign section, and ad skill. Create six portable Markdown role cards under agents/ with these filenames and responsibilities.

marketing_lead.md coordinates the assignment, reads specialist outputs, resolves conflicts against sources, and returns a checked handoff and human decision. growth_strategist.md proposes an audience hypothesis, three ad angles, and a recommended test without promising results. content_creator.md turns the approved direction into headlines, body copy, and the supported CTA using the ad skill. creative_designer.md creates a visual brief, image prompts, and planned alt text using the approved copy and palette.

Add website_designer.md to own a local offer-page preview and source files. Add growth_analyst.md to own formula-based synthetic-data findings and limitations.

Give every role six fields: owns, inputs, may do, asks before, when unsure, and done when. State the output filenames for each role. Require AGENTS.md, brand/context.md, and the Current campaign section to be read. A role card describes a job; a later explicit assignment starts an agent task.

If this is local Codex with project-file access, also create matching .codex/agents/marketing_lead.toml, growth_strategist.toml, content_creator.toml, creative_designer.toml, website_designer.toml, and growth_analyst.toml. Each standalone file must contain name, description, and developer_instructions. Use the documented current schema and inherit model settings and permissions. Read the role card within developer_instructions. Explain the six role names and how to start a new chat or refresh the client if the saved definitions are absent. In Work Cloud, use the Markdown cards with explicit delegation instead of assuming that local TOML files register there. Keep this response to role creation and inspection, then wait for prompt 04.

Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, provide the full named files as downloadable files or copyable text and explain how I can save them. Report actual saved files separately from proposed files.

END PROMPT 03

Check before continuing

Inspect one role card and its local TOML wrapper. Explain each specialist output before starting an assignment.

Prompt 04 · Assign the Growth Strategist

Paste into the selected Work or local Codex project chat.

```
BEGIN PROMPT 04
```

> Read AGENTS.md and agents/growth_strategist.md. Explicitly start the Growth Strategist assignment using brand/context.md and the Current campaign section in brand/context.md. Propose three audience-specific ad angles, recommend one, and describe one testable hypothesis. Use only the supplied fictional facts and label audience reasoning as a hypothesis. Save campaigns/discovery-box/run-01/strategy.md with the source paths, angle comparison, chosen direction, and next handoff to the Content Creator. Report the supported offer and the questions a human should review before continuing.
>
> Use a supported subagent workflow for this assignment. In local Codex use the named custom agent if available, or pass the complete role card to a supported worker. In Work explicitly delegate with the role instructions and accessible project files. If subagents are unavailable, label the result a sequential role-based draft and explain that fallback. Return the visible task reference when available, actual execution mode, output path, source check, and missing inputs. A saved role card alone is not evidence that a separate agent ran.
>
> Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, provide the full named files as downloadable files or copyable text and explain how I can save them. Report actual saved files separately from proposed files.

```
END PROMPT 04
```

Check before continuing

Inspect the task activity or fallback label, then find the chosen angle, supporting facts, and next owner.

Prompt 05 · Create copy and visual direction

Paste into the selected Work or local Codex project chat.

```
BEGIN PROMPT 05
```

Read AGENTS.md, brand/context.md including Current campaign, the saved campaigns/discovery-box/run-01/strategy.md, and the ad skill. Explicitly assign the Content Creator using agents/content_creator.md to draft three Instagram copy options. Each option needs a headline, body, CTA, audience rationale, and source-backed product claims. Save campaigns/discovery-box/run-01/ad-copy.md and choose one option for design.

Wait for the copy file, then explicitly assign the Creative Designer using agents/creative_designer.md. Read that copy, the chosen strategy, context, and skill. Save visual-brief.md and image-prompts.md in the same run-01 folder. Include square composition, palette, readable text placement, accurate product count, and planned alt text. Keep image generation as a separate tool decision. Label planned alt text pending image inspection.

Check three 100 g bags, USD 29, USD 5 shipping, and Explore the Discovery Box against the context. Show the copy-to-design handoff and both task references or sequential fallback labels. Preserve the supported offer if the interview changed other campaign details.

Use explicit subagent assignments when supported. Use the named local Codex role or pass its complete Markdown instructions to an available worker. In Work, supply accessible files and explicitly delegate. Return actual task activity or references and output paths. If delegation is unavailable, label the result a sequential role-based draft. A role definition alone is not an agent execution receipt.

Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, return downloadable files or full copyable text and name the missing file access. Report saved files separately from proposals.

```
END PROMPT 05
```

Check before continuing

Inspect the copy first, then the design file that consumed it. Trace a product claim and distinguish planned artwork from a generated image.

Prompt 06 · Coordinate the full marketing team

Paste into the selected Work or local Codex project chat.

BEGIN PROMPT 06

Act as the Marketing Team Lead in this main project conversation. Read AGENTS.md, agents/marketing_lead.md, brand/context.md including Current campaign, all five specialist role cards, the ad skill, and the saved run-01 package. Explicitly coordinate a small campaign package under campaigns/discovery-box/coordinated-01/. Create independent output files so agents avoid editing one shared file.

First ask the Growth Strategist to confirm a campaign direction and acceptance criteria from the existing strategy. After that result, delegate these independent assignments using the confirmed direction and existing reviewed inputs. The Content Creator prepares three draft social posts. The Creative Designer prepares a visual brief and image prompt for the campaign. The Website Designer creates an editable static offer-page.html with a local preview and supported offer copy, with payment and lead collection absent. The Growth Analyst reviews the synthetic data below, showing CTR, lead conversion, cost per lead, and cost per order with denominators and objective caveats. Respect the client's concurrency limits and queue tasks when needed. The main conversation waits for the specialist outputs and merges the result.

Save this supplied fictional data as data/classroom-campaigns.csv before the analyst reads it:

campaign,objective,spend_usd,impressions,clicks,landing_visits,leads,orders

Brew guide,Lead acquisition,400,40000,1000,720,144,18

Discovery Box,Purchase,800,50000,1250,900,54,48

Use CTR = clicks / impressions * 100; lead conversion = leads / landing_visits * 100; CPL = spend_usd / leads; cost per order = spend_usd / orders. Leads and orders measure different outcomes. Different objectives and the absence of randomized assignment prevent a causal comparison. Revenue and profit are unspecified.

Review the actual saved files against the brand, Current campaign section, price, shipping, CTA, source evidence, and channel fit. Assign a specific revision to its owning specialist if needed, then recheck. Save review.md and handoff.md with actual files, task references or fallback labels, checked calculations, gaps, and the next human decision. Hold image-generation charges and external actions for separate decisions.

Use explicit subagent assignments when supported. Use the named local Codex role or pass its complete Markdown instructions to an available worker. In Work, supply accessible files and explicitly delegate. Return actual task activity or references and output paths. If delegation is unavailable, label the result a sequential role-based draft. A role definition alone is not an agent execution receipt.

Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, return downloadable files or full copyable text and name the missing file access. Report saved files separately from proposals.

END PROMPT 06

Prompt 07 · Coordinate through Onigiri and voice

Use the prepared Dot conversation or read the request during a call.

BEGIN PROMPT 07

> Use Onigiri, my Personalized ChatGPT Dot, to coordinate the prepared Copper Cup project. Read AGENTS.md, brand/context.md, and campaigns/discovery-box/coordinated-01/handoff.md. Confirm the project path and available computer or app connection. Start a separate local Codex task or an available Work task with the attached sources to prepare the next draft revision. If I give the request through voice, leave a written task reference and result in this conversation.
>
> Return the task link, current status, saved output path, source checks, and pending human decision. After completion, inspect the file against the context before reporting a checked result. Explain that ending a call can leave assigned tasks running, and identify the available task-activity controls. If Dot, voice, task creation, or computer access is unavailable, explain the gap and return a clearly labeled text draft for the instructor to demonstrate.
>
> Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, return downloadable files or full copyable text and name the missing file access. Report saved files separately from proposals.

END PROMPT 07

Check before continuing

Open the written result after the call. Verify its sources, output path, and pending decision.

Prompt 08 · Save a private campaign library

Use the connected Work or Dot conversation with the named attachments.

BEGIN PROMPT 08

> Use the attached brand context including Current campaign, full core prompts 01–10, reviewed outputs, and source links to create a private Page titled Copper Cup Campaign Kit in my Personal Space. Preserve every supplied prompt verbatim with its required inputs and review check. Keep access owner-only and return the Page link and access summary in this conversation. If Pages is unavailable, return a structured document for me to save. Hold sharing and public Site creation for separate decisions.
>
> Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, provide the full named files as downloadable files or copyable text and explain how I can save them. Report actual saved files separately from proposed files.

END PROMPT 08

Check before continuing

Inspect the Page or fallback, source links, full prompts, draft labels, and owner-only access.

Prompt 09 · Draft a brief and propose a routine

Use the connected Work or Dot conversation with the named attachments.

BEGIN PROMPT 09

> Read the attached reviewed Copper Cup outputs and sources. Draft a one-time brief led by the next human decision, current status, missing inputs, and source references. Then propose a weekday 09:00 America/Los_Angeles brief and hourly checks during 09:00–17:00 for one chosen teaching week. Request the actual start and end dates and destination. Limit alerts to a changed offer, deadline risk, missing input, or decision awaiting review. Explain account usage and controls for pausing future schedules and inspecting active delegated tasks. Keep both schedules disabled and wait for a separate activation decision.
>
> Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, provide the full named files as downloadable files or copyable text and explain how I can save them. Report actual saved files separately from proposed files.

END PROMPT 09

Check before continuing

Identify the next human decision, source limits, time zone, end date, destination, and disabled status.

Prompt 10 · Adapt and review a campaign concept

Paste into the selected Work or local Codex project chat.

BEGIN PROMPT 10

> Read AGENTS.md, brand/context.md including Current campaign, the ad skill, all six role cards, the reviewed run-01 files, and coordinated-01/handoff.md. Complete a ten-minute exercise for people setting up their first home office. Preserve the supported product, price, shipping, and CTA. For the Copper Cup demo those are three 100 g bags, USD 29, USD 5 shipping, and Explore the Discovery Box.
>
> Act as Marketing Team Lead in the main conversation. Save the changed audience assignment as campaigns/discovery-box/exercise-01/assignment.md while preserving the original context and earlier runs. Explicitly assign a short audience rationale to the Growth Strategist, then one revised copy concept and visual direction to the Content Creator and Creative Designer. Return the strategy, headline, body, CTA, visual direction, image prompt, and planned alt text in one concept-and-review.md file in that exercise folder. Include a before-and-after audience comparison, a source-check table, actual task references or sequential fallback labels, and one human revision decision. Keep image generation and external actions pending separate decisions.
>
> Use explicit subagent assignments when supported. Use the named local Codex role or pass its complete Markdown instructions to an available worker. In Work, supply accessible files and explicitly delegate. Return actual task activity or references and output paths. If delegation is unavailable, label the result a sequential role-based draft. A role definition alone is not an agent execution receipt.
>
> Keep this classroom task inside the selected project. Prepare draft files only. Hold external sends, publication, scheduling, spending, deletion, and permission changes for a separate human decision. If file tools are unavailable, return downloadable files or full copyable text and name the missing file access. Report saved files separately from proposals.

END PROMPT 10

Check before continuing

Compare audiences, trace one claim, preserve the supported offer, and choose a specific revision.

Trace the coordinated campaign data

Prompt 06 review checkpoint

Inspect the separate agent assignments, static page preview, one calculation, and the merged review. A running status remains separate from a checked result.

Prompt 06 creates the CSV from its supplied fictional rows before the analyst reads it. The values support arithmetic, with lead acquisition and purchase representing different objectives.

```
campaign,objective,spend_usd,impressions,clicks,landing_visits,leads,orders
Brew guide,Lead acquisition,400,40000,1000,720,144,18
Discovery Box,Purchase,800,50000,1250,900,54,48
```

Campaign	CTR	Lead conversion	CPL	Cost per order
Brew guide	2.5%	20%	USD 2.78	USD 22.22
Discovery Box	2.5%	6%	USD 14.81	USD 16.67

CTR = clicks / impressions × 100. Lead conversion = leads / landing_visits × 100. CPL = spend_usd / leads. Cost per order = spend_usd / orders.

For Brew guide, 144 / 720 × 100 gives 20% lead conversion. USD 400 / 144 gives USD 2.78 per lead, while USD 400 / 18 gives USD 22.22 per order. The two campaign objectives and absent randomized assignment leave a causal ranking unsupported. Revenue, profit, and ROAS need additional data.

Your ten-minute guided exercise

Time	Action
Minutes 0–2	Read the changed audience and preserve the supported offer.
Minutes 2–7	Use prompt 10 to request one revised concept and role handoffs.
Minutes 7–10	Trace a claim, inspect the offer, and choose a revision.

Use your own project if you followed the demonstrations. If a task or tool stalls, the instructor can show a labeled prepared example for the review portion. Keep the original context and earlier runs intact.

Your review notes

Changed audience

Headline and body

CTA and visual direction

Source-backed claim

Specific revision and owner

Prepared exercise answer

Audience change
Original hypothesis: busy professionals brewing coffee at home.
Exercise hypothesis: people setting up their first home office may want to compare coffee roasts for their daily routine.

Revised concept
Headline: Choose a roast for your home-office routine.
Body: Explore light, medium, and dark roasts in the Copper Cup Discovery Box. Each box contains three 100 g coffee bags for USD 29 plus USD 5 shipping.
CTA: Explore the Discovery Box.

Visual direction and image prompt
Show three fictional 100 g Copper Cup bags beside a mug on a home-office desk, with cream, espresso, teal, and copper styling. Keep a clear text area for the headline, price, shipping, and CTA. Keep the setting focused on the coffee product.

Planned alt text
Three fictional Copper Cup coffee bags sit beside a mug on a home-office desk. Review this description against the finished image.

Source review
The product, price, shipping, and CTA come from brand/context.md. The changed audience comes from campaigns/discovery-box/exercise-01/assignment.md. Performance benefits, health benefits, and testimonials remain unsupported.

Human revision decision
Consider shortening the headline to improve readability. Confirm the revised layout after creating an image.
This is a prepared answer, with live task references awaiting the learner's session.

This is a prepared comparison artifact. It provides no evidence that a separate agent ran in your account. Capture your own task activity or retain the sequential fallback label.

Foundation file comparison

The complete prepared project is included in the teaching kit. This reference shows the two interview outputs so you can compare them after creating your own files.

brand/context.md

Copper Cup Coffee

Prepared reference for classroom comparison. This brand and every offer figure are fictional.

Product and offer
The Discovery Box contains three 100 g bags, one light roast, one medium roast, and one dark roast. The price is USD 29 plus USD 5 shipping.

Audience hypothesis
Busy professionals brew coffee at home and may want help choosing a roast. Treat that audience explanation as a hypothesis to test.

Voice and claims
Use warm, specific, restrained language. Product facts require this source. Certifications, sustainability claims, health benefits, awards, testimonials, discounts, and performance promises require additional evidence before use.

Visual direction
Use cream #FAF4EA, espresso #2B2118, teal #087F8C, and copper #C76A42. Keep text readable and the product depiction accurate.

CTA
Use Explore the Discovery Box for the campaign.

Current campaign
Prepare a reviewed Instagram ad concept for the stated audience hypothesis. Save the strategy, three copy options, visual brief, and image prompts under campaigns/discovery-box/run-01/. Then coordinate social drafts, a local static offer-page preview, visual direction, synthetic-data findings, review.md, and handoff.md under campaigns/discovery-box/coordinated-01/. Preserve product, price, shipping, CTA, supported claims, and source evidence. Dates, budgets, performance promises, and public launch remain unspecified.

AGENTS.md

Copper Cup Beginner Project

Sources and outputs
Read brand/context.md, including Current campaign, before drafting. Keep each run inside its requested campaign directory. Preserve earlier runs for comparison. Return source paths, actual output paths, checks, gaps, and the next human decision.

Routing
Read the relevant skill when a task matches its scope. Start specialist tasks only when the assignment explicitly requests agents. Read agents/ for portable role instructions. Local Codex wrappers live under .codex/agents/.

Evidence and uncertainty
Separate supported facts from audience hypotheses. Name missing inputs and request them before a dependent step. Report active agent tasks separately from sequential role-based drafts. Role files describe responsibilities, while explicit assignments start tasks.

Human decisions
Prepare draft files and local previews. Hold sending, publication, schedules, spending, deletion, and permission changes for separate decisions. Project instructions operate within app permissions and higher-priority instructions.

Skill and role comparison

SKILL.md

---
name: albert-copper-cup-ad-creative
description: Create Copper Cup ad concepts, audience copy, visual briefs, and image prompts from the approved brand context and Current campaign section.

Copper Cup Ad Creative

Process
Read AGENTS.md, brand/context.md, and the Current campaign section. Identify the requested audience need and preserve its hypothesis label. Draft three concepts unless the assignment requests one. Include a headline, body, CTA, audience rationale, and source for every product claim. Read the chosen concept before proposing visual direction, an image prompt, and planned alt text.

Review
Check the three 100 g bags, USD 29, USD 5 shipping, and supported CTA. Keep sourcing, certification, health, sustainability, testimonial, discount, and performance claims pending evidence. Inspect visual accuracy before describing a finished image. Label alt text planned until that review.

Completion
Save the requested files in the named campaign directory. Return paths, source checks, gaps, and the next owner. Text drafts and image prompts complete the classroom task. Image generation and external actions require their own tool access and human decision.

One role card

Growth Strategist

Owns
A supported audience hypothesis and ad direction.

Inputs
Read AGENTS.md, brand/context.md, and the Current campaign section. Use brand context and selected Current campaign section.

May do
Compare three angles and propose a bounded test.

Asks before
Spending, publication, schedules, and external contact.

When unsure
Label hypotheses and request missing evidence.

Done when
strategy.md names a chosen angle, supporting sources, and next owner.

Find the prepared files

Folder or file	Purpose
starter/	Raw facts and the interview answer card
prompts/	Full prompts 01–10
lessons/	Six units within this single session
examples/completed-beginner-project/	Prepared comparison files
brand/context.md in that example	Brand facts and Current campaign
AGENTS.md in that example	Project guidance and human review
.agents/skills/ in that example	The reusable ad process
agents/ and .codex/agents/ in that example	Six roles and local wrappers
campaigns/discovery-box/run-01/	Strategy, copy, visual brief, and image prompts
campaigns/discovery-box/coordinated-01/	Social drafts, page source, findings, review, handoff
campaigns/discovery-box/exercise-01/	Audience adaptation and comparison answer
course-files/	Preserved reference assets from the earlier tutorial
recordings/	Manifest and recording instructions
extensions/legacy-tutorial/	Earlier materials with their earlier numbering

Hidden .agents and .codex folders are included in the teaching ZIP. Enable hidden-file viewing when needed, or open their links in the repository. The learner starts in a new project, with completed examples used for comparison.

Local Codex wrapper

```
name = "growth_strategist"
description = "Growth Strategist for the fictional Copper Cup beginner course."
developer_instructions = """
Read AGENTS.md and agents/growth_strategist.md, then brand/context.md and the Current
campaign section. Follow the role card for the explicit assignment. Return actual output
paths, source checks, gaps, and next owner. Inherit parent permissions and hold external
actions for a separate human decision.
"""
```

Troubleshooting and human decisions

If this happens	Next action
A file is missing	Return to the creating prompt and inspect the saved path.
Project guidance is absent	Begin a fresh local chat, or attach and explicitly read AGENTS.md in Work.
A skill is absent	Inspect SKILL.md metadata and request explicit reading.
A local role is absent	Inspect the TOML fields and refresh the project chat.
Delegation is unavailable	Use and label a sequential role-based draft.
Dot, Pages, or routines are absent	Use the prepared capture or structured document fallback.
A claim lacks a source	Remove the claim or request evidence before proceeding.
A task finishes without a checked artifact	Open the saved file and complete its source review.

Draft preparation and a checked result leave external actions pending human decisions. Review the destination, audience, source version, data behavior, account usage, and ability to stop the task before authorizing a send, schedule, publication, image-generation charge, or launch.

This is the complete single-session curriculum. The resource files remain available for independent use and comparison.

Sources and teaching scope

Grace Leung marketing-team tutorial

Riley Brown Dot coordination video

Official AGENTS.md guidance

Official skill authoring guidance

Official subagent guidance

The instructor supplied the Leland event template and personal artwork. The October 15, 2026 revision replaces detailed Markdown creation steps with one interview and brings the medium and advanced demonstrations into this single class. Official file, skill, and agent guidance was checked October 15, 2026.

Earlier revisions reviewed the videos' auto-generated transcripts. This revision adds no new full-video playback claim. Prepared examples are authored references, and live prompt execution, new recordings, connected-tool activation, and classroom rehearsal require separate checks.

Copper Cup, its offer, and the campaign data are fictional. Current product access, connections, and interfaces can vary, so the instructor should rehearse the available tools and prepare labeled fallbacks.
