

LEARNER WORKBOOK / 60 MINUTES

Build Your AI Marketing Team with Agents

16 PROMPTS + 7 FOLLOW-UPS

Create a fictional coffee campaign with reusable skills, specialist agents, and coordinated review.

COPY

Full prompts ready to paste.

CREATE

Files, artwork, and campaign examples.

REVIEW

Checks, metrics, and next steps.

Copper Cup Coffee | Fictional classroom brand

Albert Chan | October 10, 2026

Start here

Follow a fictional coffee campaign through reusable skills, specialist agents, and coordinated review. Complete one guided ad exercise during the 60-minute session, then use the remaining prompts for follow-up practice.

Your three downloads

[Download this learner workbook](#) includes every numbered prompt, sample campaign data, instructions, and the exercise answer.

[Download the separate course deck](#) gives you the presentation slides. Video panels remain placeholders in the PDF export.

[Download the complete teaching kit](#) gives you the editable context, briefs, roles, skills, artwork, rehearsal outputs, and website files.

Your route through the workbook

Section	Pages
Setup and concepts	3-4
Brand, campaign briefs, and files	5-7
Sixteen full prompts	8-23
Campaign data and calculations	24-25
Guided exercise and example answer	26-27
Review, next steps, and troubleshooting	28-29
Sources and credits	30
Complete campaign briefs and metric definitions	31-33
Operating boundaries and four follow-ups	34-37
Voice, Pages, and campaign brief follow-ups	38-40

Choose your classroom path

With access to Work or Codex, open the project and complete prompt 14. If Dot or a connection is absent, watch the instructor demonstration and use the labeled rehearsal examples. Prompts 01-13 describe the full tutorial sequence, while prompts 15-16 cover review and launch planning.

Copper Cup Coffee, offer details, and campaign figures are fictional classroom examples.

Check your accounts first

Dot access and local connection requirements were refreshed October 10, 2026. The remaining tutorial tools retain their October 4 checks. Product interfaces, plan eligibility, and regional access can change. Check the linked official documentation before purchasing a plan.

Tool	You need	Classroom use
ChatGPT Work / Codex	An account with the required capability and access to project files.	Run prompts and inspect outputs.
Personalized ChatGPT Dot	Visible Dot access and the permitted computer or app connection.	Coordinate the project and hand off tasks.
Image generation	An available image tool and remaining account limits.	Create fictional artwork or reuse supplied assets.
Slack	An approved account connection and classroom DM or channel.	Demonstrate prompt 10.
Notion	A permitted calendar connection.	Prepare prompt 11 and review proposed entries.
ChatGPT Sites	Account availability and an approved launch proposal.	Prepare prompt 16.

Dot access and computer access

Dot rolls out gradually to eligible personal Pro 100, Pro 200, and Pro 500 plans for adults outside the EEA, United Kingdom, and Switzerland. Business Premium rolls out worldwide. Enterprise access requires administrator enablement. An eligible plan alone provides no assurance that Dot appears in your account.

App connections and computer connections grant separate access. A local computer must stay online with its app open when Dot needs local project files or skills. Work Cloud uses its own execution environment, so attach sources that it can read.

Check [Dot access](#), [computers and apps](#), and [channels](#) before class.

Understand the team

Term	Meaning in this course
Prompt	A request that names the goal, inputs, outputs, and review boundary.
Skill	A repeatable process stored in a SKILL.md file. Tools and permissions enable its execution.
Agent	A specialist assigned a task, sources, output, and review criteria.
Dot	Your personalized coordinator connected to permitted computers and apps.
Marketing Team Lead	The role that assigns tasks and reconciles the final package.

Six roles share the campaign

Role	Responsibility
Marketing Team Lead	Intake, delegation, reconciliation, final handoff.
Growth Strategist	Audience hypothesis, launch strategy, bounded experiment.
Content Creator	Social copy and brewing-guide copy.
Creative Designer	Artwork, visual briefs, image prompts, alt text.
Website Designer	Offer page and local guide-download page.
Growth Analyst	Metric calculations, limitations, test findings.

A role card describes responsibilities. An explicit delegation request starts a specialist task. In local Codex, project definitions live in .codex/agents/. In Work, attach the Markdown role and request delegation with those instructions.

Eight reusable skills

Ad creative, website building, campaign strategy, social content, performance analysis, lead magnets, content scheduling, and campaign review each have a supplied skill file. Keep the original skill names so the numbered prompts can locate them.

The instructor uses Onigiri (Personalized ChatGPT Dot). The prompts use Onigiri as the classroom Dot name. Replace Onigiri with your own Dot name when addressing your helper, while preserving file paths and skill names.

Explore Copper Cup Coffee

Copper Cup Coffee is a fictional training brand. Treat its audience as a hypothesis and its campaign figures as synthetic examples.

Item	Approved detail
Product	Discovery Box with three 100 g bags.
Roasts	One light roast, one medium roast, one dark roast.
Training price	USD 29 plus USD 5 shipping.
Audience	Busy professionals who brew coffee at home and want help choosing a roast.
Offer CTA	Explore the Discovery Box
Guide CTA	Download the brewing guide

Preserve the brand palette

Color	Hex code	Use
Cream	#FAF4EA	Background and packaging.
Espresso	#2B2118	Text and coffee detail.
Teal	#087F8C	Accent and notebook detail.
Copper	#C76A42	Warm accent and highlights.

The presentation follows the uploaded teaching template, using yellow, muted blue, white, and light gray. The workbook uses that palette for its headings and prompt panels. Copper Cup campaign assets retain their cream, espresso, teal, and copper palette.

Write copy with supported claims

Use warm, specific language and approved product details. Leave sourcing certifications, sustainability claims, health benefits, awards, customer quotes, and sales outcomes out of campaign copy until a source supports them.

The classroom offer page takes no payment. The guide page validates a fictional email address and reveals a PDF link. It keeps the address only in page memory.

Use the two campaign briefs

Campaign A - Discovery Box

Prepare a coherent launch package for busy home brewers. Create three Instagram ad concepts, a one-page offer site, and six social posts across two weeks. Use Explore the Discovery Box across the assets.

Save ad concepts and prompts, image assets, the offer preview, strategy.md, six post folders, a review PDF, and a schedule CSV. Keep every product claim traceable to brand/context.md.

Review the price, shipping, CTA, palette, alt text, page layout, and links. Preserve the draft status until the separate scheduling or publication decision.

Campaign B - Brewing guide

Create a ten-page home-brewing guide and a local download-page demonstration. Include brewing ratio starting points, a troubleshooting worksheet, and a restrained Discovery Box CTA. Use the campaign dataset to explain a lead-acquisition test hypothesis.

Return editable guide copy, PDF, cover, metric findings, measurement plan, and review checklist. Use learner@example.com for the classroom form. The local page validates its format and reveals the guide link.

Follow the prepared examples

Find ads, strategy, six social posts, artwork, schedule, and offer-page files under campaigns/discovery-box/rehearsal/. Find the ten-page guide, findings, metrics, and download-page files under campaigns/lead-magnet/rehearsal/.

Ask the app to show a local preview using its supported preview feature. Keep the project root available so relative image and PDF paths resolve. New runs belong in the new-run/ folders named by the prompts.

Open files without confusion

Download the teaching-kit ZIP and extract its contents. Inside ai-marketing-course, open course-files as the primary local project folder in Codex. Preserve hidden .agents and .codex folders inside course-files. Attach the named source files when using Work.

Folder or file	Use it for
AGENTS.md	Project instructions and external-action boundaries.
brand/context.md	Approved offer, audience, claims, palette, and CTA.
briefs/	Discovery Box and brewing-guide campaign briefs.
prompts/	Sixteen numbered requests ready to copy.
.agents/skills/	Eight reusable skill definitions.
agents/	Six portable Markdown role cards for Work.
.codex/agents/	Six project-scoped agent definitions for local Codex.
data/	Synthetic campaign CSV and metric definitions.
assets/	Fictional artwork and design references.
campaigns/	Prepared rehearsal examples and separate new outputs.

Before you paste a prompt

Confirm that the current chat can read the required sources. Paste the complete prompt as one request. Replace Onigiri only when you address your Dot. Leave file paths and named skills intact.

If the app cannot read a folder, attach the specific files and ask it to follow their instructions. Record its reported sources and compare the delivered files against the expected output list.

The next sixteen pages include the full prompts. For copying without PDF line wraps, open the corresponding .txt file in the repository [prompts folder](#).

01 Open the project

Purpose Establish the approved sources before generating assets.

Where to paste Work project chat or local Codex.

Files you need Use brand/context.md, AGENTS.md, and both campaign briefs.

Before you paste Attach the project or named sources, then paste the prompt below.

Copy the complete prompt

```
Read this Copper Cup teaching-kit folder as the source for a fictional marketing project. Inspect brand/context.md, AGENTS.md, and the two briefs. Confirm the product, audience, offer, skill paths, and output structure. Report missing inputs before generating campaign assets. Keep the supplied rehearsal outputs separate from new runs.
```

Expected output A source summary with the offer, audience, skills, output folders, and missing inputs.

Review the result Check USD 29, USD 5 shipping, and three 100 g bags. Confirm source paths and separate rehearsal outputs.

Your next step Continue to prompt 02 after the summary passes review.

[Open the copy-ready prompt file](#)

02 Give Dot a classroom role

Purpose Define the coordinator responsibility and permitted actions.

Where to paste Dot conversation in ChatGPT.

Files you need AGENTS.md and brand/context.md, with project or computer access.

Before you paste Address your visible Dot, rename Onigiri if needed, and paste the prompt below.

Copy the complete prompt

```
Your name for this exercise is Onigiri. Coordinate the fictional Copper Cup marketing project that I attach. Prepare drafts and local previews, and bring review decisions to me in ChatGPT. Read AGENTS.md and brand/context.md before acting. Use connected tools only within their permissions. Ask before scheduling, sending, deploying, collecting leads, or spending. Confirm the project path and available connections. This request establishes a classroom role for the current project, with future recurring duties requiring a stated cadence.
```

Expected output A confirmed project path, available connections, and review boundaries.

Review the result Check that local files are accessible and external actions wait for specific review.

Your next step Continue to prompt 03. If Dot is absent, observe the instructor and use a project chat for prompt 14.

[Open the copy-ready prompt file](#)

03 Verify the ad skill

Purpose Prepare a reusable ad-creation process.

Where to paste Work project chat or local Codex.

Files you need .agents/skills/albert-copper-cup-ad-creative/SKILL.md.

Before you paste Open or attach the skill file, then paste the prompt below.

Copy the complete prompt

```
Read .agents/skills/albert-copper-cup-ad-creative/SKILL.md as the required skill specification. Create or verify that reusable project skill without changing its name or scope. Confirm it appears in the available skill interface. Leave existing files intact when the supplied definition already satisfies the specification.
```

Expected output A confirmation that the supplied skill exists and can be followed.

Review the result Check the original name and scope. Preserve the existing supplied definition.

Your next step Continue to prompt 04 with the skill and campaign brief available.

[Open the copy-ready prompt file](#)

04 Create three ad concepts

Purpose Generate a reviewable ad package.

Where to paste Work project chat or local Codex.

Files you need The ad skill, Discovery Box brief, brand context, and assets/.

Before you paste Paste the prompt below. If image generation is unavailable, use the rehearsal artwork and retain the image prompts.

Copy the complete prompt

```
Use the albert-copper-cup-ad-creative skill with  
briefs/discovery-box-campaign.md. Create three Instagram ad concepts and the  
corresponding images. Read brand/context.md and reuse assets/ when appropriate.  
Save outputs to campaigns/discovery-box/new-run/ads/. Return the concepts,  
images, generation prompts, alt text, and claim-review checklist. Label the  
campaign fictional and keep it ready for review.
```

Expected output Three concepts, images, generation prompts, alt text, and a claim-review checklist.

Review the result Check product details, offer, CTA, visible wording, palette, and every claim.

Your next step Open campaigns/discovery-box/new-run/ads/ and review before proceeding.

[Open the copy-ready prompt file](#)

05 Verify the website skill

Purpose Define the website output and completion checks.

Where to paste Work project chat or local Codex.

Files you need Use the supplied website-builder SKILL.md and design-references.md files.

Before you paste Attach the complete website skill and design references, then paste the prompt below.

Copy the complete prompt

```
Read the complete website skill definition and design references. Create or verify the reusable website skill with those requirements. Keep the supplied skill name. Confirm a responsive page, a local preview, and form testing form part of its completion criteria.
```

Expected output A verified reusable process with responsive preview and form testing criteria.

Review the result Check source retention, page testing, asset paths, and the local demonstration boundary.

Your next step Continue to prompt 06 after confirming the skill.

[Open the copy-ready prompt file](#)

06 Ask Dot for the offer page

Purpose Coordinate a website task using the approved offer.

Where to paste Dot conversation in ChatGPT.

Files you need Discovery Box brief, website skill, context, and permitted project access.

Before you paste Rename Onigiri if needed, then paste the prompt below into your Dot conversation.

Copy the complete prompt

```
Onigiri, locate the attached Copper Cup project and read
briefs/discovery-box-campaign.md. Use the website-builder skill to prepare a
one-page Discovery Box offer site. Route the implementation to Codex if that is
available in this environment. Keep the output under
campaigns/discovery-box/new-run/site/. Show the preview and source files. Prepare
the Sites deployment plan for review before any launch.
```

Expected output A local one-page offer preview, source files, and a Sites deployment plan.

Review the result Open the local website preview. Check price, shipping, three bags, CTA, and image loading.

Your next step Keep the site in draft and continue to prompt 07.

[Open the copy-ready prompt file](#)

07 Prepare the Growth Strategist

Purpose Define the strategy specialist and execution path.

Where to paste Work project chat or local Codex.

Files you need Use the Growth Strategist role files in `agents/growth_strategist.md` and `.codex/agents/growth_strategist.toml`.

Before you paste Use TOML discovery in local Codex. In Work, attach the Markdown role and request explicit delegation.

Copy the complete prompt

```
Read agents/growth_strategist.md and the corresponding
.codex/agents/growth_strategist.toml. In a local Codex project, verify the TOML
definition loads. In ChatGPT Work, use the Markdown role as specialist
instructions for an explicit delegated task. Confirm its role, inputs, output, and
approval boundary. Keep model settings inherited from the parent.
```

Expected output A role confirmation with inputs, output, and approval boundary.

Review the result Check inherited model settings and the environment-specific role path.

Your next step Continue to prompt 08 after the specialist is available.

[Open the copy-ready prompt file](#)

08 Delegate campaign strategy

Purpose Turn a campaign goal into a bounded test recommendation.

Where to paste Work project chat or local Codex.

Files you need Growth Strategist role, Discovery Box brief, CSV, and metric definitions.

Before you paste Paste the prompt below and wait for the specialist result.

Copy the complete prompt

```
Delegate to a Growth Strategist using agents/growth_strategist.md. Read the
Discovery Box brief and synthetic past-campaigns.csv with metric-definitions.md.
Recommend a launch campaign and a bounded experiment. Save strategy.md and
experiment-brief.md under campaigns/discovery-box/new-run/strategy/. Cite input
paths and distinguish data findings from recommendations. Wait for the specialist
result before returning the reviewed strategy.
```

Expected output strategy.md and experiment-brief.md under the named new-run/strategy/ folder.

Review the result Compare lead and purchase objectives separately. Check denominators and distinguish findings from recommendations.

Your next step Review the strategy, then prepare the content role with prompt 09.

[Open the copy-ready prompt file](#)

09 Prepare the Content Creator

Purpose Define the social-content specialist and output structure.

Where to paste Work project chat or local Codex.

Files you need Use the Content Creator role files in `agents/content_creator.md` and `.codex/agents/content_creator.toml`.

Before you paste Use the local definition or attach the portable role, then paste the prompt below.

Copy the complete prompt

```
Read agents/content_creator.md and the corresponding
.codex/agents/content_creator.toml. Verify the local Codex definition or use the
Markdown role as specialist instructions in Work. Confirm the output structure
includes six post folders, copy, visual briefs, prompts, alt text, and a draft
schedule.
```

Expected output A role confirmation covering six post folders, copy, briefs, prompts, alt text, and schedule.

Review the result Check that each requested artifact has a named output and review point.

Your next step Continue to prompt 10 after the role is available.

[Open the copy-ready prompt file](#)

10 Request the social campaign

Purpose Coordinate strategy checks and two weeks of social content.

Where to paste Approved Slack DM to Dot, or the Dot conversation.

Files you need Permitted Slack connection, project, approved brief, and role files.

Before you paste Rename Onigiri to your Dot name. Paste into the permitted classroom destination, or demonstrate in ChatGPT if Slack is unavailable.

Copy the complete prompt

```
Onigiri, use the attached Copper Cup project and the approved Discovery Box brief to prepare two weeks of social content. Delegate audience and campaign checks to the Growth Strategist and post creation to the Content Creator using their supplied role files. Wait for both results, reconcile the offer and CTA, and return six post folders, a review PDF, and a schedule CSV. Keep the schedule in relative days until I provide a start date and time zone. Bring the package to me for review before any calendar write or publication.
```

Expected output Six post folders, a review PDF, and a schedule CSV in relative days.

Review the result Wait for both specialists. Reconcile the offer and CTA, then review all six posts and image text.

Your next step Keep the package pending review. Use prompt 11 only with a confirmed start date and time zone.

[Open the copy-ready prompt file](#)

11 Prepare the calendar entries

Purpose Translate a draft schedule into a reviewable calendar proposal.

Where to paste Dot or Work with a permitted Notion connection.

Files you need Six reviewed posts, schedule.csv, start date, and time zone.

Before you paste Provide your intended start date and time zone, then paste the prompt below.

Copy the complete prompt

```
Use the six reviewed post folders and schedule.csv. Prepare a dated calendar plan for the start date and time zone that I provide. If either input is missing, ask for it. Show every proposed entry, its content, the destination calendar, and the connected account. Wait for my specific approval before writing to Notion or another connected calendar. Read back approved entries after writing.
```

Expected output Proposed dated entries with full content, destination, and connected account.

Review the result Inspect every entry and account. Approve a specific write only after reviewing the complete plan.

Your next step If an approved write runs, read back its entries. Otherwise preserve the CSV as a draft.

[Open the copy-ready prompt file](#)

12 Verify the routing rules

Purpose Keep repeatable skill tasks and specialist delegation distinct.

Where to paste Work project chat or local Codex.

Files you need AGENTS.md, role files, and skill definitions.

Before you paste Paste the prompt below after the earlier roles and skills are available.

Copy the complete prompt

```
Review the project agent roles and skills. Keep AGENTS.md concise and verify its routing distinguishes repeatable skill tasks from specialist judgment. Require an explicit coordinated-campaign request for delegation, named outputs for specialists, and a merged review before handoff. Preserve the current external-action approval gates.
```

Expected output Concise routing rules and a merged-review requirement with preserved approval gates.

Review the result Check that coordinated requests name outputs and delegation remains explicit.

Your next step Continue to prompt 13 for the coordinated brewing-guide campaign.

[Open the copy-ready prompt file](#)

13 Coordinate the lead campaign

Purpose Create a guide, artwork, download page, and data findings with a team.

Where to paste Work project chat or local Codex.

Files you need Lead brief, CSV, definitions, brand, roles, and skills.

Before you paste Paste the complete prompt below. Wait for specialists and the lead reconciliation before reviewing the package.

Copy the complete prompt

```
Use the supplied lead campaign brief and past campaign data. Delegate performance analysis to the Growth Analyst, guide copy to the Content Creator, guide artwork to the Creative Designer, and the page to the Website Designer. Have the Marketing Team Lead reconcile the package after the independent tasks finish. Build a ten-page brewing guide, editable source, cover, local download page, and metric findings. Validate the demo form using learner@example.com. Return the review package and a Sites deployment proposal. Keep production collection and launch pending review.
```

Expected output Ten-page guide, editable copy, cover, local page, findings, and Sites proposal.

Review the result Test learner@example.com, check PDF delivery, inspect all guide pages, and verify metric denominators.

Your next step Keep production storage and deployment pending review. Continue to prompt 15 after the class exercise.

[Open the copy-ready prompt file](#)

14 Complete the guided exercise

Purpose Adapt one ad for people setting up a first home office.

Where to paste Available Work or Codex project chat.

Files you need Ad skill, Discovery Box brief, brand context, and supplied artwork.

Before you paste Use the ten-minute worksheet on page 26, then paste the full prompt below.

Copy the complete prompt

```
Use the ad-creative skill and Discovery Box brief. Change the audience to people setting up their first home office while preserving the product, price, shipping, and palette. Draft one ad concept with headline, body copy, CTA, visual brief, image prompt, and alt text. Save it to campaigns/learner-exercise/. Check every claim against brand/context.md and explain the audience change. Use the existing artwork if image generation would exceed the classroom time box.
```

Expected output One concept with headline, copy, CTA, visual brief, image prompt, and alt text.

Review the result Score the five-point rubric. Preserve product, price, shipping, and brand palette.

Your next step Share the audience change and one evidence-based revision. Use prompt 15 for a broader review.

[Open the copy-ready prompt file](#)

15 Review the campaign package

Purpose Check the package before external actions.

Where to paste Work project chat or local Codex.

Files you need Campaign-review skill, brief, and all new deliverables.

Before you paste Paste the prompt below and provide every output the review needs to inspect.

Copy the complete prompt

```
Use the campaign-review skill to inspect the new campaign outputs. Check offer consistency, supported claims, readable visuals, alt text, mobile layout, PDF links, and the metric denominators. Return a review checklist with evidence, defects, and required decisions. Keep scheduling, sending, deployment, and production lead collection as separate approvals.
```

Expected output An evidence-based checklist with defects, required decisions, and integration gaps.

Review the result Require source evidence or observed checks for every pass. Assign unresolved defects before handoff.

Your next step Fix or assign defects, then use prompt 16 to prepare a specific launch proposal.

[Open the copy-ready prompt file](#)

16 Prepare the launch proposal

Purpose Define the destination, visibility, data behavior, and rollback before launch.

Where to paste Work project chat with Sites access.

Files you need Approved website source, campaign brief, and review checklist.

Before you paste Paste the prompt below after approving the draft campaign content.

Copy the complete prompt

```
Inspect the approved website source and campaign brief. Prepare a deployment proposal for ChatGPT Sites with destination, visibility, source version, lead-data behavior, privacy requirements, and rollback approach. Explain the difference between a local download demo and a production form. Wait for approval of this specific proposal before deploying. After an approved launch, verify the live URL, mobile layout, form behavior, storage destination, and PDF delivery.
```

Expected output A deployment proposal with source version, privacy requirements, and production integration gaps.

Review the result Review the complete destination and data behavior. A local download demo needs added storage, consent, and delivery design for production.

Your next step Keep launch pending specific approval. After approval, verify the live URL and production behavior.

[Open the copy-ready prompt file](#)

Read the synthetic data

Every row below is synthetic classroom data. All spending figures use USD. Leads count completed email sign-ups. Orders count paid Discovery Box purchases in this training dataset. Lead and order outcomes require separate comparisons.

Campaign	Objective	Spend	Impressions	Clicks
brew-guide	Lead acquisition	400	40000	800
discovery-box	Box purchases	600	50000	1000
desk-ritual	Box purchases	450	30000	600
gift-checklist	Lead acquisition	350	35000	700

Campaign	Landing visits	Leads	Orders
brew-guide	720	144	18
discovery-box	900	90	36
desk-ritual	540	54	12
gift-checklist	630	126	14

Copy-ready CSV

```
campaign,objective,spend_usd,impressions,clicks,landing_visits,leads,orders
brew-guide,Lead acquisition,400,40000,800,720,144,18
discovery-box,Box purchases,600,50000,1000,900,90,36
desk-ritual,Box purchases,450,30000,600,540,54,12
gift-checklist,Lead acquisition,350,35000,700,630,126,14
```

Use the correct denominator

CTR = clicks / impressions x 100. Lead conversion = leads / landing visits x 100. Calculate CPL by dividing spending by leads. Cost per order = spend / orders.

Report an undefined result when a denominator equals zero. Attribute orders consistently before comparing purchase costs. Revenue, profit, and ROAS require additional data.

Check the calculations

Campaign	CTR	Lead conversion	CPL	Cost per order
brew-guide	2%	20%	USD 2.78	USD 22.22
discovery-box	2%	10%	USD 6.67	USD 16.67
desk-ritual	2%	10%	USD 8.33	USD 37.50
gift-checklist	2%	20%	USD 2.78	USD 25.00

Trace one row by hand

For brew-guide, $800 / 40,000 \times 100$ gives 2% CTR. Its $144 / 720 \times 100$ gives 20% lead conversion. $USD\ 400 / 144$ gives USD 2.78 CPL after rounding. $USD\ 400 / 18$ gives USD 22.22 cost per order.

Compare within the campaign objective

Brew guide and gift checklist each show 20% lead conversion and USD 2.78 CPL. Discovery Box shows USD 16.67 cost per order, while desk ritual shows USD 37.50. Choose the intended outcome before ranking campaigns.

The rows lack randomized assignment and a common objective. Use these rows to propose a test hypothesis. A causal lift claim requires a controlled comparison. Audience mix, attribution, and lead quality remain open questions.

Write a bounded experiment

Use a useful brewing guide as the lead-acquisition hypothesis. Track completed sign-ups divided by landing visits and spend divided by leads. Define lead quality and follow-up measurement before launch.

Write your proposed audience, offer, comparison, primary metric, denominator, budget limit, review date, and stopping rule. Ask for missing inputs instead of inventing a campaign commitment.

Your ten-minute exercise

Adapt one Discovery Box ad for people setting up their first home office. Preserve the product, USD 29 price, USD 5 shipping, and Copper Cup brand palette. Use prompt 14 on page 21.

Time	Your task
Minutes 0-2	Read context and brief. Write one sentence describing the revised audience need.
Minutes 2-6	Run prompt 14. Capture headline, copy, CTA, visual brief, image prompt, and alt text.
Minutes 6-9	Check claims and offer. Identify one revision with evidence from the brief.
Minutes 9-10	Share the concept and explain the audience change.

Audience need

Headline and body copy

CTA and visual brief

Image prompt and alt text

One revision with supporting evidence

Score one point each for supported product details, audience-specific wording, consistent CTA, clear visual direction, and useful alt text. A five-point result passes the classroom review. This rubric assesses the draft, while commercial performance requires a later campaign test.

Compare the example answer

Use this sample to check the required fields and offer accuracy. Your wording can differ while preserving the approved facts.

Audience need

People furnishing a first home office want a repeatable coffee routine beside their new desk.

Headline

A coffee routine for your new desk

Body copy

Try three roast styles in the Copper Cup Discovery Box. Each bag contains 100 g, with a training price of USD 29 plus USD 5 shipping.

CTA

Explore the Discovery Box

Visual brief

Place a cream mug beside a teal notebook on an uncluttered home office desk. Keep the coffee bags visible and use copper accents.

Image prompt

Create fictional Copper Cup coffee artwork showing a cream mug and three cream coffee bags beside a deep teal notebook. Use morning window light and leave space for the supplied headline. Preserve the packaging details from assets/ and keep unrelated text out of the image.

Alt text

A coffee mug and Copper Cup bags beside a notebook on a home office desk.

Review the source evidence

The copy preserves all three 100 g bags, USD 29 price, and USD 5 shipping from brand/context.md. The desk setting adapts the audience context, and the CTA matches the campaign brief. The draft avoids health, productivity, sourcing, and customer-outcome claims.

Review, then choose the next step

Keep the class demonstration bounded

Prepared campaign assets demonstrate expected outputs. They provide rehearsal examples, while live Dot, Slack, Notion, and Sites execution depends on your account and connections. A generated file alone proves neither publication nor successful production integration.

The classroom guide form validates a fictional email address and reveals a PDF link. It keeps the address in page memory. Production collection requires an approved CRM or database, privacy and consent design, server-side validation, spam controls, retention, deletion procedures, delivery handling, and credential protection.

Check the complete review package

Check	Evidence to inspect
Offer and claims	Three 100 g bags, USD 29, USD 5 shipping, supported claims.
Creative and copy	Readable text, consistent CTA, approved palette, useful alt text.
Pages and PDFs	Image loading, keyboard flow, mobile layout, working PDF path.
Measurement	Correct denominator, objective, attribution, and undefined values.
External actions	Named account, destination, content, visibility, and specific approval.

Practice after the session

First, rerun prompt 14 with another fictional audience and review the offer. Next, use prompt 08 to propose a bounded campaign test. Then use prompt 13 to coordinate a guide package and prompt 15 to audit its outputs. Prompt 16 prepares the launch decision after draft review.

Record the sources, output paths, checks completed, remaining defects, and decisions awaiting approval. Scheduling, sending, deployment, and production lead collection each require a separate decision.

Keep learning when a tool stalls

Dot is absent

Check plan, region, rollout, app update, and administrator access against the current official guide. Observe the instructor handoff and complete the ad exercise through an available project chat.

Skills are absent

Confirm ZIP extraction preserved `.agents/skills/` and each `SKILL.md`. Open course-files as the primary local project folder. In Work Cloud, attach the skill file and explicitly request its supplied process.

Agent roles are absent

Local Codex uses `.codex/agents/`. In Work, attach the Markdown role and explicitly request specialist delegation. Keep model settings inherited from the parent.

Image generation exceeds the time box

Reuse the rehearsal artwork and finish the headline, copy, visual brief, image prompt, and alt text. You can generate a new image after class.

Slack or Notion is unavailable

Check the permitted account connection and destination. Demonstrate the handoff in ChatGPT and review the supplied schedule CSV. A CSV remains a draft until an approved calendar write succeeds and readback confirms it.

A page image or PDF fails

Ask the app to serve a local preview from the course-files root. Check the relative asset and PDF paths. Test a malformed address and `learner@example.com`, then open the revealed guide link.

Sites is unavailable

Keep the local preview and use prompt 16 to prepare the deployment proposal. Review destination, visibility, data behavior, source version, and rollback before any launch.

Teaching reference

Grace Leung, "ChatGPT Work + Dot: Build your AI Marketing Team (Agents + Skills)", October 3, 2026. [Watch the original video](#).

The adaptation follows her progression through Work, Codex, Dot, brand context, ad and website skills, specialist agents, Slack content handoff, routing, and a coordinated lead campaign. Copper Cup replaces Lexora. Original coffee artwork and original diagrams replace source visuals, while promotional claims are omitted.

Riley Brown, October 9, 2026. [Watch the additional Dot video](#). The voice, written-result, private Page, and brief extensions adapt his demonstrated concepts for Copper Cup.

All 38 course slides follow the instructor-supplied Leland event template. Speaker scripts, full prompts, campaign artwork, and quarter-width prompt panels beside recording frames remain available for teaching.

Dot access, local connections, and delegated-task controls were refreshed October 10, 2026. Other tutorial tools retain October 4 checks. Recheck changing availability before your session.

Brewing references and artwork

[Stumptown Coffee Roasters, How to Perfect Your Pour-Over](#) and [Blue Bottle Coffee, How to Make French Press Coffee](#) provide the qualified brewing starting points used in the supplied ten-page guide.

Coffee assets were generated for this fictional workshop. Their image prompts remain in assets/image-generation-prompts.md. Product artwork represents fictional products, while all campaign data and offer details are training examples.

[Return to the course repository](#) to download the deck, complete teaching kit, and prompt files.

Complete Discovery Box brief

The following text reproduces the supplied source file. Preserve these instructions when preparing your campaign outputs.

Discovery Box Campaign Brief

Fictional campaign for classroom practice. Status remains draft for review.

Goal and audience

Prepare a Discovery Box launch for busy professionals who brew coffee at home. The exercise goal is to produce a coherent review package, with offer accuracy and a clear CTA as the acceptance criteria.

Offer and channels

Three 100 g coffee bags for USD 29 plus USD 5 shipping. Create three Instagram ad concepts, a one-page offer site, and six social posts across two weeks. Use Explore the Discovery Box throughout those assets.

Deliverables

Save ad concepts and prompts, image assets, an offer-page preview, strategy.md, six post folders, a review PDF, and a schedule CSV. Mark each asset as a fictional demo. Use relative paths inside the project.

Review criteria

Every product claim comes from brand/context.md. The price and shipping stay consistent. The main CTA is visible. Images use the approved palette. Each post has alt text. The page adapts to mobile. Approval covers the draft content separately from any future external action.

[Open the original source file](#)

Complete brewing-guide brief

The following text reproduces the supplied source file. Preserve these instructions when preparing your campaign outputs.

Brewing Guide Campaign Brief

Fictional campaign for classroom practice. Status remains draft for review.

Goal

Create a ten-page home-brewing guide and a local download-page demo. Use data/past-campaigns.csv to explain the test hypothesis. Review lead conversion and cost per lead separately from Discovery Box purchases.

Audience and deliverables

Help busy home brewers choose a repeatable brewing routine. Create a guide with clear starting ratios, a troubleshooting worksheet, and a restrained Discovery Box CTA. The landing page should display the guide cover and offer its PDF through a working demo form. Provide a measurement plan and a review checklist.

Classroom form boundary

Use a fictional test address such as learner@example.com. Validate its format in the browser and provide the PDF link. Keep the submitted address in the current page session only. Production lead storage, privacy language, opt-in handling, email delivery, spam protection, and deployment require separate integration and review.

[Open the original source file](#)

Complete metric definitions

The following text reproduces the supplied source file. Preserve these instructions when preparing your campaign outputs.

Metric Definitions

All rows in past-campaigns.csv contain synthetic data for a fictional brand. All spending figures use USD. Leads count completed email sign-ups. Orders count paid Discovery Box purchases in the training dataset. A lead and an order measure different outcomes.

$\text{CTR} = \text{clicks} / \text{impressions} \times 100.$

$\text{Lead conversion} = \text{leads} / \text{landing_visits} \times 100.$

$\text{CPL} = \text{spend_usd} / \text{leads}.$

$\text{Cost per order} = \text{spend_usd} / \text{orders}.$

Use the stated denominator for each metric. Report an undefined value when a denominator equals zero. Attribute orders consistently before comparing cost per order. These rows lack randomized assignment and a common campaign objective, so they support a test hypothesis rather than a causal finding. Revenue, profit, and ROAS require additional data.

Give each agent a lasting role

Use the Growth Strategist as a lasting role across campaign assignments. A new brief names the current task, while the role defines permitted choices and completion evidence.

Field	Copper Cup example
Owns	A source-backed growth plan.
Inputs	Brief, brand context, and synthetic sample data.
May	Review sources, compare data, and draft tests.
Asks before	Sending, publication, spending, deletion, or access changes.
When unsure	Flag missing evidence, conflicting instructions, or missing access.
Done when	Supported claims, stated gaps, a bounded test, and saved output paths.

Optional follow-up A

After prompt 07, paste this into your selected course-files project task. Review the returned role contract before using it.

```
Read agents/growth_strategist.md, brand/context.md, and
briefs/discovery-box-campaign.md. Draft a six-field role contract for the Growth
Strategist with headings OWNS, INPUTS, MAY, ASKS BEFORE, WHEN UNSURE, DONE WHEN.
Separate lasting responsibilities from the current campaign assignment. Permit
source review, sample-data analysis, and draft creation within the project.
Require specific approval before external sends, publication, spending, deletion,
or permission changes. Resolve routine choices within the brief and record
assumptions. Escalate missing source evidence, conflicting instructions, or
missing access. Define completion through supported claims, stated gaps, a bounded
test proposal, and saved output paths. Return the contract for review without
changing files or permissions.
```

Limit access to the campaign’s needs

Connect only the files and systems required by the campaign. Permission to prepare a draft leaves external sending, publication, spending, deletion, and access changes awaiting specific approval.

Action	Permission scope
Read and draft	Read approved sources and prepare six social drafts inside the project.
Approved internal update	Name the calendar, fields, account, and approved write before updating entries.
External or consequential action	Approve the complete message, audience, launch destination, or spending limit before execution.

Reversibility helps planning, while privacy and audience also affect permission. Approve the classroom account, channel, and complete message before the Slack demonstration.

Optional follow-up B

After preparing social content, paste this into your project task and review the permission plan.

Read the Copper Cup campaign brief and the current role instructions. Return a permission plan with three sections covering actions permitted within the project, internal updates needing a named destination and approved fields, and external or consequential actions awaiting specific approval. Include preparing six social drafts, proposing Notion calendar entries, sending a Slack message, publishing a page, and spending campaign funds. State the required account, destination, content, budget limit if relevant, and undo method for each proposed action. Keep all sends, updates, launches, spending, deletion, and permission changes pending until their scope is approved. Flag private data and audience changes even when an action can be reversed. Return the plan without executing it.

Rehearse, repair, and retest

Observe an initial draft, repair the instruction or handoff behind a failure, then retest a different campaign case. These stages organize rehearsal and provide no automatic permission increase.

Stage	Copper Cup check
Observe	Record unsupported guesses, missing inputs, and human corrections.
Repair	Update the instruction or handoff causing the repeated failure.
Retest	Use a temporary case with missing shipping information or an unsupported health claim.

Preserve approved source files. An accepted result states missing information, holds unsupported claims, and respects the permission scope. Track accepted results, corrections, review loops, time, and cost when available.

Optional follow-up C

After prompt 15, paste this into your project task to prepare a test plan and blank run log.

```
Use the supplied fictional Copper Cup context and approved campaign brief. Draft a rehearsal plan for the Growth Strategist with three stages that observe an initial draft, repair a repeatable instruction or handoff failure, and retest with a different campaign case. Include one case with missing shipping information and one request containing an unsupported health claim. Define the expected escalation for each case. Track accepted results, human corrections, review loops, elapsed time, and cost when available. Keep absent cost data labeled unavailable. Require supported claims and approval boundaries in every accepted result. Return the test plan and a blank run log without changing project files or performing external actions.
```

Expand autonomy after evidence

Begin with observation and draft preparation. Awaiting human review preserves the sending boundary. Scheduling adds a trigger, while coordination adds routing. Authorize those capabilities separately.

Review evidence	Before expanding access
Accepted examples	Collect repeated accepted results across varied cases.
Escalation	Confirm that missing evidence and missing permission reach the human owner.
Pause and undo	Test a pause or undo path and name the responsible person.
Reduce access	Review quality failures, changed connections, and recurring manual corrections.

Fixed run counts provide no reliability guarantee. A weekly drafting routine can retain human publishing decisions, and the Copper Cup classroom campaign remains draft-only.

Optional follow-up D

After collecting rehearsal results, paste this into your project task. Keep expansion pending human review.

```
Review the Copper Cup rehearsal results provided in this conversation. If results are absent, return a draft-only recommendation and name the missing evidence. Compare the current permission scope with one proposed additional capability, such as preparing a weekly draft schedule or routing tasks to the supplied specialists. Require repeated accepted results across varied cases, correct escalation, a tested undo or pause path, and an identified human owner before recommending an expansion. Treat scheduling and coordination as separately authorized capabilities. List the permitted inputs, outputs, destinations, and approval boundaries. Keep sending, publication, spending, deletion, and permission changes pending. Include triggers for reducing access after quality failures or an integration change. Return a recommendation for human review without enabling automation or changing access.
```

Delegate a draft through voice

Open the prepared Copper Cup project on the connected computer and keep its app online. Open Onigiri’s conversation, then use voice or text to request a separate Codex task.

Review step	Evidence to inspect
Task status	A task link and written progress in the Dot conversation.
Completed output	A saved handoff checked against the approved campaign brief.
Offer facts	Three 100 g bags, USD 29, and USD 5 shipping.
Stop controls	Ending a call can leave tasks running. Inspect Activity and Scheduled separately.

Copy follow-up E

Paste this full prompt into Onigiri’s conversation or read it during a call. The fallback returns a draft in the conversation if the local capability is absent.

```
Use the prepared Copper Cup Coffee project on my connected computer. Start a separate Codex task in that project to draft a one-page campaign handoff from brand/context.md and briefs/discovery-box-campaign.md. Include the supported product, audience hypothesis, price, shipping, outputs, review owner, and next action. Keep outputs inside the project and hold external sends, publication, spending, deletion, and permission changes. In this Dot chat, post the task link, current status, output path, and missing inputs. After completion, inspect the draft against its sources and post the checked result and pending decisions here. If the computer, project, or task capability is unavailable, explain the missing access and return a draft handoff in this conversation.
```

After checking the handoff, continue with shared context and the numbered ad prompts. Use a 90-second recording during the instructor demonstration.

Save a private campaign library

Attach the approved brief, context, supplied prompts, and reviewed outputs in the Dot conversation. Ask for a private Page that collects the campaign sources and reusable prompts.

Before using the Page	Check the result
Source files	All required inputs are attached and source links resolve.
Prompt library	The supplied prompts retain their complete wording.
Access	The Page remains owner-only in Personal Space.
Next action	Copy the prompt and supply its named files for the next task.

Copy follow-up F

Paste this prompt after the guide package has passed review. Pages access is required for the saved library, and structured text provides the fallback.

```
Use only the Copper Cup context, approved brief, prompts, and reviewed outputs attached in this conversation. If a required source is absent, name it before drafting. Create a private Page titled Copper Cup Campaign Kit in my Personal Space. Include the campaign brief, supported offer details, labeled draft assets, source links, and a prompt library. Preserve each supplied prompt verbatim and add its input files, expected result, and review checkpoint. Use copyable prompt blocks when available, with plain text as a fallback. Keep the Page owner-only, leave external sharing pending, and post its link and verification summary in this chat. If Pages is unavailable, return the structured document here for me to save.
```

Inspect its link, supported offer, and draft labels before sharing. A public Site has a separate audience and launch decision.

Draft a brief and propose a routine

Attach the fictional brief, metric snapshot, and reviewed draft outputs. Prepare a one-time brief with the next decision first, then review two disabled routine proposals.

Routine	Scope before activation
Weekday brief	09:00 America/Los_Angeles for one chosen teaching week.
Focused follow-up	Hourly from 09:00 to 17:00, with named alert conditions.
Human review	Confirm dates, sources, usage, destination, pause controls, and permitted actions.

Copy follow-up G

Paste this prompt into Onigiri's conversation. It leaves schedule creation pending a separate decision.

```
Using the attached Copper Cup brief, fictional campaign metrics, and reviewed draft outputs, prepare a marketing brief for today. Lead with the next decision, then list the current draft status, missing inputs, sources checked, and next action for the human owner. Label the campaign data synthetic and distinguish observed figures from hypotheses. After this one-time brief, propose two separate recurring routines without enabling either. First propose a weekday brief at 09:00 America/Los_Angeles for one teaching week. Then propose an hourly follow-up check during that week from 09:00 to 17:00 in that time zone. Limit both to the named Copper Cup sources and draft review. The follow-up should notify me only for a changed offer, a deadline at risk, a missing required input, or a decision awaiting my review. Name the destination, end date, usage considerations, and pause controls. Hold schedule creation, external sends, publication, spending, deletion, and permission changes for a separate decision.
```

Review the saved settings and first result after authorizing a selected routine. Inspect active delegated tasks separately when pausing future runs.
